Description

What the program does

Quiz Game with High Score is a terminal-based Python program that presents multiple-choice questions about basic computer and Python concepts. The player enters a name, answers each question using A, B, C, or D, and immediately receives feedback. After all questions are answered, the program calculates the total score and percentage, displays performance feedback, and keeps the highest score achieved during the session.

10 **Questions**

A–D **Answer Input**

% **Score Result**

★ **High Score**

Key idea: simple Python fundamentals organized into clear functions.

Objectives

What the project aims to achieve

GENERAL OBJECTIVE

To develop a Quiz Game with High Score using Python.

01 Present multiple-choice questions and accept valid A, B, C, or D answers.

02 Check each response and give immediate correct or incorrect feedback.

03 Calculate the player’s score and percentage after the quiz.

04 Track the highest score and allow the player to replay the quiz.

Flowchart
